TEMPERATURE DISPLAY (Infrared picture)

This unit displays temperature colors from -16°C to $+48^{\circ}\text{C}$. Temperature display within above range is as follows.

-16°C to $+32^{\circ}\text{C}$: Tones from white to white-to-black
 $+32^{\circ}\text{C}$ to $+48^{\circ}\text{C}$: Black

NOTE: Temperatures lower than -16°C and higher than $+48^{\circ}\text{C}$ are displayed in white and black, respectively.

However, when a color bar range (16 colored gradation) is selected, the selected range is displayed in colors according to the picture color number and the other ranges (outside the range of the color bar) are shown in tones and black as mentioned above.

(EX.) In case that color bar range is -8°C to $+24^{\circ}\text{C}$.

NOTE: Only when picture color number 5 or 6 is selected, temperatures outside the range of the color bar are shown in black and white (not tones).

ENTERING DATA (orbital data, date & time, L/L position, etc.)

Press **ENT** after each line of data entered.

Press **ENT** to retain presently used data.

To clear incorrect data, press **C** ----->

Entire line of data is erased.
(Note however that if the cursor is at the head of a line of data when this key pressed the preceding line is erased.)

FUNCTION KEYS

The function keys, labeled F1~F6 at the top of the keyboard, are used to select a function menu, which is displayed across the bottom of the screen.

(Ex.) The menu below (SYSTEM INITIALIZATION) is displayed following the key strokes of **MENU** ⇒ **2** ⇒ **0** ⇒ **ENT**

To select the OPER(ating) Mode menu, for example, press **F 1**.

SYSTEM (Operating Mode) INITIALIZATION

CALL UP

SU-18 CIF/NMEA RCV CHECK																		
0	1	2	3	4	5	6	7	8	9	0	1	2	3	-----	7	8	9	

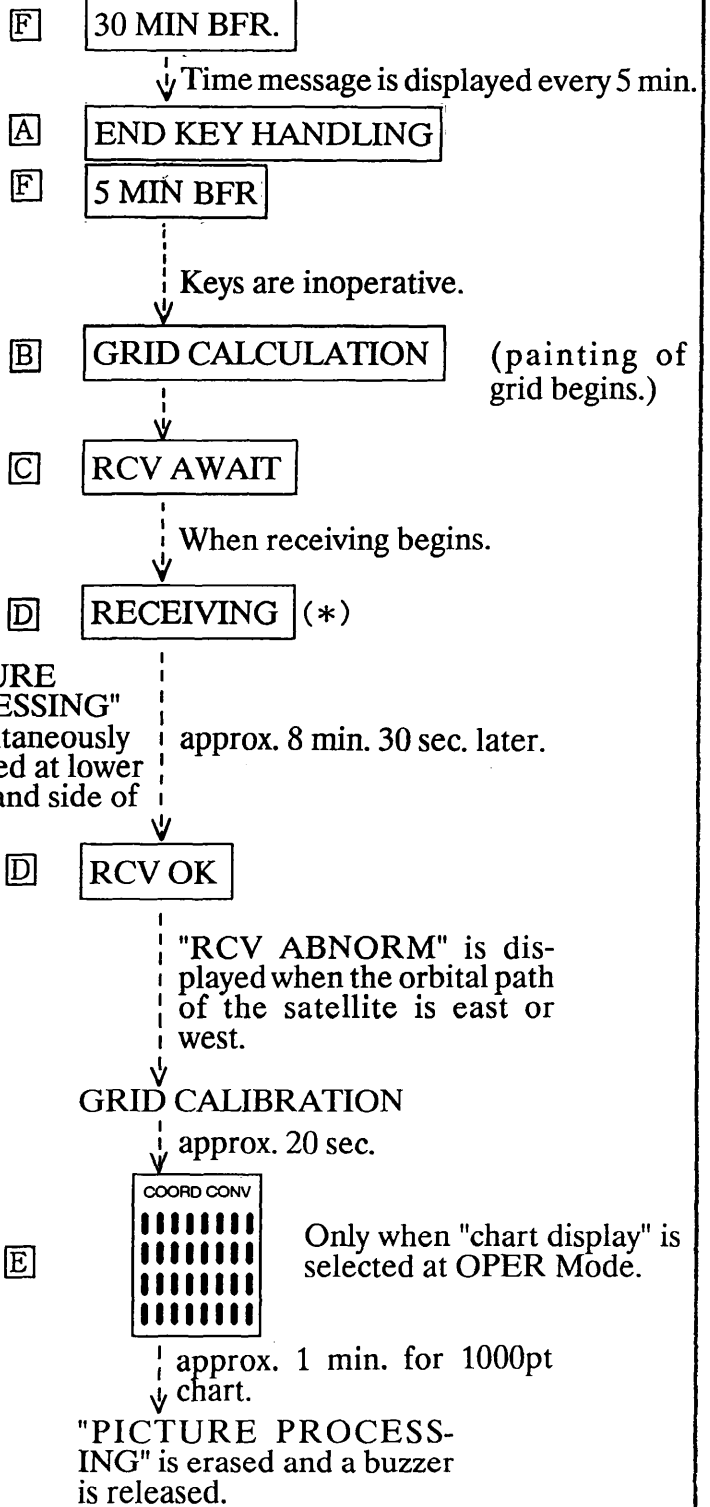

NOTE: Check time, L/L position and water temperature data for correctness.

ESC ⇒ ESC ⇒ ESC

RECEIVING

The sequence of receiving is as follows.

LOCATION OF MESSAGE MESSAGE

Automatic recording and printing are executed if Auto. CMT REC and Auto Print Mode (page 17) are selected. If automatic receiving is selected, satellite forecast is automatically executed.

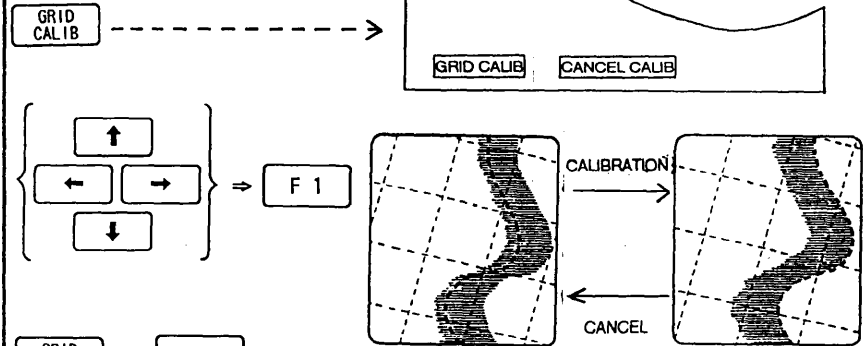

GRID CALIBRATION

(For aligning chart with picture. Not operative in $\times 0.5$ zoom.)

PREPARATION

- (1) Perform calibration on area which you use often.
- (2) For ease of calibration, enlarge a nearby island, coastline, etc. Refer to page 14.
- (3) If necessary, perform shade range enhancement. Refer to page 14.

CALIBRATION

TO CANCEL CALIBRATION

TEMPERATURE CALIBRATION

(Calibration by own ship pos. [no clouds or fog overhead of own ship] or by cursor pos. [where no clouds or fog overhead of cursor pos.]

CONFIRMATION

Check water temperature data for correctness.

CALIBRATION BY OWN SHIP'S L/L POSITION

CALIBRATION BY CURSOR POSITION

Place the cross cursor where no clouds or fog exists.

SPECIFY SATELLITE

[F 1] -----> SYSTEM A (137.50 MHz → NOAA 10)

[F 2] -----> SYSTEM B (137.62 MHz → NOAA 11)

** UPDATE **
SYSTEM A □ 00.0°C?

[+] [-]

ENTER TEMP. CALIBRATION DATA

[F 1] -----> “+”

[F 2] -----> “-”

[] ⇒ [] ⇒ [] ⇒ [ENT]

(calib value = Δt value)

↓

Returns control to last used display screen.

NOTE 1. Input calibration value may be different from value displayed as “TEMP CALIB DATA” at the top of the screen.

(EX.)	Tenth's digit of input data		Tenth's digit of displayed data
	0, 1, 9		0
	2 ~ 3		2
	4 ~ 6	⇒	5
	7 ~ 8		7

RECORDING

(Received picture is automatically recorded when automatic recording mode is selected. However it is uncompensated raw data.)

PREPARATION

- (1) Insert a cassette tape. (storage capacity: 41 pictures, or 40 pictures in the case of simultaneous recording of IR/VIS pictures.
- (2) Insert a floppy disk (FD) for recording. When picture is recorded on a FD, all data (system program, etc.) stored in the FD will be erased.
(Storage capacity: 1 picture/FD. Recording time to FD is much faster than that to CMT.)

CALL UP CMT RECORD MENU

(1) Cassette Tape

[MENU] ⇒ [5] ⇒ [ENT]

[IR PIC REC] [VIS PIC REC] [SIMUL REC] [FILE LIST]

SELECT MEMORY BANK TO BE RECORDED

- (Infrared picture memory --- MEMO 1)
- (Visible-light picture memory --- MEMO 2)
- (Both IR/VIS memory)
- (File search)

NOTE: This unit has two picture memory banks to which data can be stored. The memory bank where the presently displayed picture is saved is shown at the right-hand side of the screen. See table below. For example, if "1•VIS" is displayed, the presently displayed picture (visible-light picture) is saved in the infrared picture memory. Then, to record the picture saved in the infrared picture memory, you would press . At this time, file number where the picture is recorded is displayed at the bottom of the screen.

Memory bank in use	Type of picture	Indication at right-hand side of the screen
Infrared (MEMO 1)	Infrared	IR
	Picture after processing	IR1
	Visible-light	1•VIS
Visible-light (MEMO 2)	Visible-light	VIS
	Picture after processing	IR2
	Infrared	2•IR

TO RETURN CONTROL TO LAST USED DISPLAY SCREEN

CALL UP FD SAVE/LOAD MENU

(2) Floppy Disk

[FD SAVE/LOAD] When picture data is recorded to FD, contents of FD will be erased.

SAVE TO FD
